

Streamit joins forces with **Axis Communications** at ISE 2018, following its recently becoming an Axis Application Development Partner. The partnership involves the combination of Axis network speakers with **Lisa audio players** managed on a single platform, boosting the two companies' value proposition to the in-store audio market.

Also on show at ISE 2018 are upcoming Streamit A/V solutions. First is the **wAVe Developer Kit**, an A/V streaming device and software platform combination allowing customers to develop own custom products. It is based on Linux and Chromium, and supports 4K video.

Following in late 2018 is the **MaveLution, the first Streamit digital signage player**. It should deliver "high quality" audio and video to customers.

Another offering is the **SAS310-- a next-generation audio encoder/streamer** aimed at clubs, schools, universities, radio stations, conferences and churches wanting to stream live events with high-quality audio over the internet.
