

Cabletime presents a range of features and enhancements to the MediaStar IPTV, streaming and digital signage range at ISE 2020, including the MediaStar 798 encoders and 782 decoders able to distribute HDCP Pro protected content in a legally compliant manner.

The company says signage is a key theme for ISE 2020. As such, MediaStar highlights will include support for leading digital signage cloud platforms and the ability to run protected and legal live content within signage applications as well as the MediaStar Creator and DS signage platform.

The MediaStar Media Player features more extensive HTML 5 support and integration with 3rd party applications, including "Way Finding" apps, while MediaStar Media Manager features full internationalisation options for non-Western character sets. This allows customers to control using the language of choice.

Another big focus on the MediaStar stand involves secure solutions for protected content to the desktop and updates to the recaster and transcoder platform customers can use for audio as well as video transcoding.
