

Visix APPOINT: Digital Signage Power Point

Written by Bob Snyder

Visix's new APPOINT isn't "like PowerPoint for Digital Signage." **It is PowerPoint for digital signage** ...

APPOINT is software that is essentially a plug-in to MS PowerPoint, which allows you to use PowerPoint to build and schedule digital signage displays. APPOINT adds templates and graphics widgets to PowerPoint itself and then APPOINT adds in a software-based media player that turns the PC running PowerPoint into the DS player -- *oh, and you can still use the PC for other applications at the same time*

APPOINT is perfect for small digital signage applications in schools (e.g., menus in cafeterias, weather and information for students and faculty), doctor's offices, retail, menus and small office DS applications. These won't put you to sleep.
