Pico Genie presents a discrete projection solution for digital signage, conferences and classrooms-- the A800, an in-ceiling projector offering up to 800 lumens brightness and wireless connectivity.

The **A800** uses DLP LED projection, and slots into a suspended ceiling without need for a mount. It has a diameter of just 18cm, with 4.4cm height. A 90-degree pivot design allows users to project images anywhere from floor to ceiling, while the addition of Android OS makes app downloading and pairing with mobile devices and PCs easy.

The projector is also compatible with digital signage and content management apps, especially when paired with an LED lightsource lifespan of 30,000 hours. Connectivity comes through HDMI as well as wifi, and it also supports external memory.

The A800 is available now.
