One of the products **Peerless-AV** will be featuring at InfoComm 2018 is their **Xtreme High Bright Outdoor Displays**

These displays suit any outdoor digital signage or entertainment solution for any professional application-- from mass transit to QSR to stadiums and more.

Eliminating the need for vents, filters or exhaust fans, the fully-sealed design provides protection against weather, water and dust. A patented **Dynamic Thermal Transfer** system keeps internal components warm even in extreme cold-- and properly cooled in extreme heat.

With the highest water and dust ingress protection ratings in its class, the Xtreme High Bright display is suitable for outdoor locations.
