---

Philips Professional Display Solutions (Philips PDS) launched at ISE 2019 their **MediaSuite range of monitors with built-in Chromecast** as well as full access to the Google Play Store.

Each of the new models features the Philips Professional Display Solutions Android-based OS, with extended lifetime to ensure the latest security enhancements and remain up-to-date for much longer.

Philips PDS' new MediaSuite range includes seven models in two series, one for FHD versions and — for the first time — a series with UHD performance. The **HFL6014U UHD series** is available as 43", 50", 55" and 65" models with slimline, silver bezels and a swivel stand.

The **HFL5014 FHD** series is available in black in 32", 43" and 50".

Built-in Chromecast functionality offers customers, installers and guests a connection between MediaSuite TVs and any compatible device, with no login or app download required.

Allows full access to the content on one's own devices, casts onto hotel room TV, plus access to Google Play Store — with thousands of compatible apps, including major services such as YouTube, Deezer and Spotify, plus local news, weather and traffic information.
