

ISE 2020 sees NEC sharing its vision of the future for the changing nature of modern corporate and business environments, as enabled by digital signage, collaboration and connectivity technologies.

Products on show include the professional-grade P506QL, P605UL and PX1004UL projectors aimed at meeting rooms and corporate rooms, as well as the large venue single-chip DLP PX2000UL. Also seen is the InfinityBoard, an all-in-one collaboration display for professional users, enhanced with the Quicklaunch meeting application and NEC Room Management Service platform.

The 65-inch PCP Touch Table demonstrates interactivity and object detection capabilities, opening signage opportunities for product promotion in retail. The NEC ALP (Analytics Learning Platform) business intelligence platform shows how to create experiences and deliver customer insights. In addition, the Raspberry Pi-powered NEC MediaPlayer presents convenient out-of-the box operation and content control, standalone or via network.

NEC also previews some upcoming display technologies, such as the M Series range of large format displays offering modular computing capabilities with SDM and Raspberry Pi Compute Module. Together, they deliver superior colour accuracy, reliability and future-proofing. Finally,

NEC's Shared Vision of the Future at ISE 2020

the company demonstrates the Direct View LED-FA009i2-165 bundle and the video wall UX Series UX552S displays for mission-critical applications.

“Good communication is multi-directional,” NEC says. “When we communicate with our colleagues and customers through open and transparent channels using the latest technology, we work together more easily and for better outcomes. We’re showcasing a wide of array of display technology and collaboration solutions here at ISE, and we can’t wait to share our ideas on the future of visualisation.”
