Evident Technologies and Samsung enter into a patent licensing and purchasing agreement for Evident's **quantum dot LED technology**. This agreement grants Samsung worldwide access to Evident's patent portfolio for all products related to quantum dot LEDs from manufacture of the quantum dot nanomaterials to final LED production.

Evident was the first company in the world to commercialize quantum dot LEDs with products launched in 2007. Quantum dots are nanometer-sized semiconductor crystals with commercial promise in applications from solar energy conversion to thermoelectrics to LEDs.
