The “Lightbox” is an indoor Digital Signage Display, available in various sizes and dimensions.

Pixled wanted to widen the application base for selected products so designed Lightbox for places and spaces needing high brightness displays-- including retail environments, advertising applications and for venues of all types (particularly stadia).

Depending on the size of the display - and quality expectations - the Lightbox unit can be equipped with a wide choice of LED tiles in different resolutions, with 4 mm, 6 mm, 8 mm and 10 mm pitches currently available. The “Lightbox” is available with either single or double sided LED displays

In addition to the dynamic standard range, custom elements can be designed and produced as to suit by Pixled's specialist team.
