The world's largest mobile 360-degree projection dome is known as “Magic Globe” because of its enormous size of 25 meters in diameter and a 360° all-round projection.

It’s used for events, promotions or as a stand-alone object for corporate events.

Thanks to its transparent material, Magic Globe is an attraction from outside and especially natural from inside.

Magic Globe offers room for up to 400 people depending on size of magic globe you order. It is available in different sizes ranging from 6m up to 25m in diameter!

Its lit exterior attracts visitors towards its glow, visible from a distance.

Magic Globe can be individually customized to accommodate your client’s advertising message or design.

Magic Globe creates HD picture worlds with special effects via 3D animation, videos and also live video-input like TV. Thanks to sophisticated software technology, the depiction takes place via a virtually distortion-free, 360-degree, all-round projection.

Maker Vertigo Systems is a spin-off of **FhG** (Fraunhofer Gesellschaft).
