Sony unveils the second installment of high end projectors in its VPL-D100 range. Designed specifically to cater for the SMB and corporate markets, the VPL-DW125, VPL- DX145, VPL-DX125 and VPL-DW120 complement Sony's existing range launched in July, alongside its VPL-E200 series.

Each projector encompasses Sony's eco and user-friendly features, including an auto lamp dimming function, Auto Brightness Adjustment Function, Eco Mode and a new fine-tuned cooling system to reduce clouding of the bulb, which has extended the lamp life to approximately 7000 hours (depending on the lamp mode selected).

They also come standard with 1X RGB, 1X HDMI and Video, a 12-bit 3D digital gamma correction for images, meaning less noise and smoother gradation.

Sony also announced two more projectors in its education-specific VPL-E200 series: the VPL-EW275 and VPL-EW245, which include a 16W high-wattage speaker, 2xRGB, HDMI, S-Video, RS-232C, RJ-45, microphone input and optional wireless capabilities.

Robert Meakin, Business and Education Product Manager, Sony Professional Solutions Europe said: "This second installment of our new E and D Series projectors only strengthens the breadth of our offering across the corporate and education markets. This latest range of projectors build on the foundations we have laid in July and offer the high quality, eco-friendly features that customers have come to expect from Sony."
