---

Vivitek Corporation will show its newly updated range of large venue and educational projectors at InfoComm MEA.

On display will be a preview of the **D7180HD; the world's first ultra-short throw HD projector** ; the **D8800 for the Pro AV staging business** and the **D5280U, all-around projector** for business, education and leisure applications.

The D7180HD is an ultra-short throw projector with a native 1080p resolution and delivers a large 86" to 97" image from a zero distance. The D7180HD will be shown with an impressive edge-blended picture of 4 units in a rear projection setting, using the **Vioso Anyblend** software, demonstrating the signage and simulation applications.

The D8800 has a native WUXGA resolution (16:10) format, which allows for full HD resolution, and an impressive 8000 lumen output. Built using DLP technology, it offers broad connectivity across a range of formats including HDMI, DVI, BNC Components, RJ-45, HDSI in/out. Weighing in at approximately 30kg, the projector can be stacked up to four times if required. In addition, it allows projection onto curved surfaces to enable image warping and geometric correction.
