Creosity releases the Stealth Series HD digital signage system for the mainstream retail marketplace.

All Stealth displays contain integrated Ethernet and wireless adapters, enabling real-time updates to advertising, content and schedules internet.

With a Stealth Series AR display, you order, remove it from the box, hang it on the wall and turn it on. You'll be automatically connected to the web-based SignPassage media management command center.

Stealth Series is available in 20", 22", 24", and 32" (16:9) HD formats. All products are capable of a maximum of 1920 x 1080 (at 30 frames per second), enabling broadcast quality (720p & 1080p), HD display of both video and still life content. Stealth Series displays are illuminated at a 400-500 cd/M2 of brightness, and 20000:1 contrast ratio.

All Stealth products are constructed with industrial grade aircraft aluminum.
