

With the Multeos M401 and M461 public displays, NEC Display Solutions launches 40" and 46" monitors with 1920 x 1080 resolution for the design-minded.

"It very often happens that store owners choose TV sets when it comes to selecting screens for their digital signage systems – for design reasons," says Thorsten Prsybyl, Product Line Manager Public Displays Europe at NEC Display Solutions. Their panels, however, fall significantly short of dedicated public displays in terms of quality and reliability. "With the Multeos product range, we are focusing on customers that appreciate professional technology and an appealing design," continues Prsybyl.

The NEC Option Slot for expansion modules such as the built-in PC or the DVI Daisy Chain Board offers technical as well as visual advantages. The extensions replace external distribution equipment and the cables they depend upon.

As well as DVI and HDMI, Multeos M401 and M461 offer a DisplayPort connection, Ethernet connection, and RS-232 interface.

The displays offer extended combination possibilities for picture-in-pictures from different signal sources. The simultaneous input for two PCs is now also possible via DVI and VGA.

NEC Display Solutions offers two special Multeos introduction bundles starting January 2010. With the purchase of a new Multeos model, customers can choose between a free (otherwise optional) stand and a free wall mount solution.

Multeos M401 and M461 will be commercially available as from December 2009 in black or silver priced at €1574 respectively €2099 (inc. VAT). NEC Display Solutions Europe offers a 3-year warranty for its displays including backlights.
