At ISE 2014, Christie introduced its 65-inch flat panel digital display solutions.

The LED edge-lit **Christie FHD651-T** and **Christie FHD651-P** have a thin profile for easy installation – just 2.7-inches deep for the touch (T) and 2.1-inches deep for the non-touch (P) version.

Both commercial-grade LCD flat panels are designed for meeting rooms, classrooms and digital signage in corporate spaces, museums, education facilities, houses of worship, theatres, and hospitality and retail environments where conveying the message with bright images for long time periods without interruption is essential.

Featuring up to four simultaneous touches, the Christie FHD651-T has high-accuracy infrared touch technology.

Richard Heslett, senior product manager, Christie, says “With the Christie commercial-grade 65-inch flat panels, end users can count on professional AV performance with brilliant visuals and greater functionality all at an affordable price tag. They can relax in the knowledge that they have a display designed for long run times each day and years of use with the added assurance

of a full commercial warranty. And with their small bezels and super slim profile, the sleek and elegant Christie FHD651-T and Christie FHD651-P easily and seamlessly fit any space.”

Mountable in portrait or landscape mode, both flat panels have built-in speakers, offer a wide range of inputs to easily connect any source and support RS232 commands for ease of automation and control, while displaying up to 1.07 billion colours and 4000:1 contrast ratio.

Both flat panels seamlessly combine with the Christie Brio multi-site presentation and collaboration solution. With long-lasting LED backlighting, the new flat panels are energy efficient and consume minimal power for maximum sustainability and a reduced environmental footprint.

The new Christie FHD651-T and Christie FHD651-P ship in April with a 3-year parts and labour warranty.
