Eiki International launches its **EK-800U** single chip DLP projector which can be installed in any vertical angle (**360 degree vertical configuration**).

It's specified at 12,000 ANSI Lumen brightness and a 5000:1 (DA:ON) contrast ratio. The WUXGA (1920×1200) resolution EK-800U inputs include VGA, HDMI, HDBaseT and 3G HD-SDI.

Integrated with powered zoom and focus as well as vertical and horizontal lens shift (V: +- 60%, H: +/- 25%), the new model also has image blending, warping, color matching.

It's a high quality, top-of-the-range installation projector but despite the good specs, the most interesting feature is its ability to meet any configuration angle when installing. For example, it can even be **mounted to show content in portrait mode**.

Go Eiki EK-800U, 360 Degrees Vertical Configuration
