

If you are in Vegas for InfoComm, **Daktronics** won't have to go far to show you recent installations. Daktronics has several new high-profile local video installations: the **T-Mobile Arena** selected Daktronics to design, manufacture and install 25 LED video displays in and around the new venue which opened last month. It includes the first see-through display in the city--and one of the largest in the United States.

In addition, **GGP's Fashion Show**, the most prominent shopping center along Las Vegas Boulevard, enlisted Daktronics to help revamp their plaza's outdoor digital signage. All told, it includes more than 929 sq. m (10,000 sq. ft.) of Daktronics-manufactured LED video.

Inside the Las Vegas Convention Center, Daktronics will show a 1.9 mm high resolution display

and talk about **ADFLOW Networks**-- recently acquired by Daktronics for its delivery of digital media solutions to retailers, convenience stores and other businesses. Daktronics will show how they can now impact a diverse group of digital signage applications.

In addition to showcasing ultra-HD LED video, Daktronics will also display its wide range of differing pixel pitch technologies on a module wall consisting of 1.9, 2.6, 4, 6, 8, 10, 15 and 16 millimeter line spacing as well as Daktronics proprietary 13HD and 15HD pixel layouts.
