Calling it “World’s First 10,000 & 12,000 Lumen Solid State Laser Projector,” Digital Projection International’s new **INSIGHT LASER 4K projector** is a 20,000-hours, no-lamp laser projector.

Aimed at simulation, visualization, entertainment, house of worship and large-screen applications, DPI says the INSIGHT LASER 4K has been developed with a ‘Set it and Forget it’ directive, delivering a simpler user experience. And, by bypassing regular lamp replacement cycles, nearly all lifetime costs for the INSIGHT are incurred at time of purchase.

Engineered within a lightweight and rugged all metal chassis, the INSIGHT 4K series offers the benefits of a laser light source (primarily, longevity – 20,000 hours of life) being projected through a phosphor wheel, yielding 12,000 lumens of brightness.

The INSIGHT 4K also delivers full 4K 3D display capability. Dual HDMI and DVI inputs enable the latest high-bandwidth video delivery. A full range of 4K lenses, offering throw ratios from 1.13:1 to 4.98:1, with extensive vertical and horizontal lens shift, is available as well.

DPI says this projector should be available by the end of the year
