Famaste presents the first Portuguese-branded interactive multi-touch display at ISE 2020-- the Wingsys Interactive Panel (WIP), designed for immersive and collaborative applications in both business or classroom environments.

The Wingsys display features IR and PCAP technology in a variety of sizes. It handles 4K resolution and runs on Android 8.0, allowing for a simple and intuitive interface, wireless screen sharing and interaction from any classroom computer. ik Classroom Management (ikCM) software provides teachers with monitoring, interaction, control, management and diagnosis tools, ensuring students get the most out of ICT equipment.

The teacher also gets the Access Pen, a security tool able to lock and unlock multitouch equipment, taking full control of the technology and protecting it from unauthorised access and misuse of the internet or confidential information contained within. The display also supports real-time feedback, conducts class discussions, has a student diary with a complete record of all homework activities, lessons and reviews, and encompasses "Question and Answer" assessments.

"As the need for collaborative learning spaces grows, so does the demand for technology in the classroom. Wingsys now introduces solutions for smart digital classroom or business environments through interactive dashboards provided with free applications and software designed to meet curriculum requirements," Famaste says. "Our complete solution is easy to use, simple to install, designed with over 50,000 hours of use, video call, low

maintenance and no ongoing subscription costs."

In addition to education, the Wingsys display adapts to other environments through dynamic collaboration tools, making it ideal for the business sector.
