Vision follows up ISE 2019 with the March release of new floorstands, the **VFM-F20** and **F25** floor stands, the

F10

flipchart-style floorstand and the motorised height-adjustable

F40

The VFM-F20 and F25 can hold displays up to 75-inch, and are tailored to suit collaboration spaces. As such, they feature shelves to carry a camera and laptop attached to the display. A rotait to portrait feature allows use with interactive displays such as the Samsung Flip, providing means to work collaboratively without interruption, while cable management promises to be "exceptional."

The F10 combines a modern aesthetic with larger wheels for easy movement. Optimised for displays ranging from 50- to 55-inch, it holds them at a 7-degree angle to reduce glare for all audiences. It thus enhances meetings and brainstorming, while providing an excuse to stop using paper flipcharts.

The final floorstand is the F40. Available in wall mounted, wheeled, XL wheeled and floor plate freestanding versions, the stands hold displays up to 86-inch, and enable simple height adjustments inspired by the latest interactive flat panels. The stands weigh 30kg, and ship
