The **Edbak ERM101** electric full service video wall mount for multi-screen video wall installations, designed and manufactured in Europe, is offered as their best-in-class solution-- built with intentional robust quality, tool-less micro adjustment, and a contactless electric pop-out mechanism for access and service to each display in the video wall.

This product can be controlled from your mobile with a dedicated app.

The ERM101 electric flat screen wall mount is intended for professional flat screen monitors and provides Edbak's safest service access system ever. Frameless monitors are very sensitive to touch, and require a contactless electric pop-out system that eliminates the need to touch the screen, and potentially damage it. Edbak has incorporated this with its innovative pop-out guide system ("The most critical structural component of the wall mount," explains Edbak).. This makes servicing very convenient, saving time and improving safety.

The independent 8-points alignment system helps install the flat screen monitor flush with the wall surface, without any special tools, while the universal open-lattice structure and the integrated cable management system ensure easy installation and the neatest finish to the LED video wall.

Edbak ERM100 Electric Full Service Video Wall Mount with Micro Adjustment

The seamless carrier frame is also very robust, providing a strong attachment point to the wall substrate. An arrangement of round holes and slots covers each possible monitor fixing layout, while the Edbak cross marker system helps in the precise planning of the video wall layout, speeding the assembly and installation process, saving you unnecessary positioning adjustments.

All structural components have been designed and manufactured by experienced professionals at the Edbak production facility in Poland, incorporating every applicable European standard.

KEY FEATURES:

- Adjusted from your mobile with an app
- Modular design enables multi-screen installations
- 8 -point tool-less fine alignment system for building perfectly flush and level video walls
- Integrated cable management for safe pop-out and retraction of monitor
- Fully designed and manufactured in Europe
- Electric power drive for contactless pop-out of the flat screen panel
- Supported flat screen sizes: 42" to 85"
- Universal VESA mount
