

Peerless Shows Digital Signage Stand at DSE

Written by Marco Attard
02. 05. 2011

Later this year Peerless will ship a movable cart/stand product for digital signage displays that's designed to display up to four digital screens simultaneously. Constructed of welded steel, it's made with gusseted uprights in its tubular frame to avoid tipping and a horizontal rail system allows users to adjust side-by-side displays. Peerless even says even at full capacity, the cart can be easily moved by one individual.

The product can accommodate screen sizes from 40" to 60" through staggered hole patterns on the vertical supports. Conversion to a stand is quickly accomplished by replacing the wheels with the available Peerless leg accessory leveler.
