Chief announces a new suspended ceiling projector system **designed to cut install time by one-third** .

The new design incorporates an improved suspended ceiling plate, column system, mount and universal interface.

For speed and accuracy of adjustment, a new mount was created that builds upon the breakthrough successes of the **CMS440** suspended ceiling tile kit and Chief's award winning projector mounts. The RPT mount's absolute image control adds
Tool-Free Microzon
adjustment with a positive drive system to keep adjustments in place once set – no need for set screws.

The **SYSAUW Suspended Ceiling Projector System** comes out of the box in the order needed with the mount and column preassembled. The adjustable ceiling plate allows placement above or below tile and accommodates inconsistent T-grids. A detachable electric plate can be sent to the electrician for pre-wiring.

Centris Technology enables fingertip positioning with new tool-free lock down. The adjustable 0-12" column has separate inlay channels for high and low voltage cables. The improved universal interface easily locks/unlocks at the projector connection. Quick-disconnect from

interface to projector and interface to mount for easy access while maintaining registration.

The SYSAUW Suspended Ceiling Projector System will launch at the end of Q4, 2015.
