---

Extron Electronics says its new FOXBOX SR HDMI and PowerCage FOX SR HDMI, high performance fiber optic-to-HDMI scaling receivers are now shipping.

They accept a fiber optic signal with audio, RS-232 control, and HDCP-compliant HDMI, DVI, VGA, or HD component video, scaling the video to the optimal output resolution for the display. These scaling receivers support resolutions up to 1920x1200, including HDTV 1080p/60.

Available in multimode and singlemode models, they also provide many integrator-friendly features such as Key Minder® for continuous authentication of HDCP compliance, audio de-embedding, Auto Input Memory, and internal test patterns. The FOXBOX SR HDMI and PowerCage FOX SR HDMI are for fiber optic installations that require scaling of high resolution content.

As part of the larger, comprehensive FOX Series of fiber optic products from Extron, the FOXBOX SR HDMI and PowerCage FOX SR HDMI are compatible with the FOX Series HDMI, DVI Plus, DVI, VGA, and VGA/YUV transmitters. In addition, the scaling receivers can be used in combination with Extron fiber optic matrix switchers for support of enterprise-wide distribution of HDCP-compliant HDMI signals.
