Smart-e's range of CAT* extenders (CAT* refers to CAT 5, 5e, 6, 7 and 8 structured cabling) is specifically designed for the digital signage market.

The transmitter options are available in three output types: Single output (SLX-TX711), Triple output (SLX-TX713), and Five output (SLX-TX715), each compatible with the compact receiver SLX-RX711. Paired together the equipment provides a compact solution that extends video and audio transmission up to 100m on CAT* cabling.

The design is based on, and compatible with, Smart-e's SLX-400 CAT* extender range supporting high res video up to 1280x1024 featuring sync format, polarity preservation, video looping input, in line power for receivers, and a secure DC connection. A rack mounting kit is also available.
