POPAL introduces a set of guidelines designed to help facilitate system interoperability for digital signage.

"This standard is the first of a group of comprehensive POPAL standards to address the need for interoperability."

"The business case is clear- fewer projects with wasted efforts and lower barriers to adoption of standards."

The Standards were developed by POPAL's Digital Standards Sub-Committee which includes more than 100 members.

Companies that agree to the standards may identify themselves through the use of a POPAL compliance logo.
